Unsourced material may be challenged and removed. The third generation Camaro continued through the 1992 model year. The large and complex rear window reflected recent advances in car glass design. The 1982 model introduced the first Camaros with a hatchback body style, and such options as factory fuel injection, and a four cylinder engine. The Camaro Z28 was Motor Trend magazine's Car of the Year for 1982. Dog dish style hubcaps were standard; full wheel covers were optional as were steel, five spoke 14x7 inch body colored rally wheels. Its own lower body pin striping, gold Berlinetta badging, and headlamp pockets were painted in an accent color. The taillights got a gold and black horizontal divider bar. The interior came standard with custom cloth interior, a rear storage well cover and additional carpeting on rear wheelhouses. It also came standard with additional body insulation and full instrumentation. The Z28 had a different nose, a three piece rear spoiler and front, side, and rear lower body valances in silver or gold. Just above the valance was a three color lower body stripe that encircled the car. Headlamp pockets on the Z28 were black. Standard were new 15x7 inch cast aluminum five spoke wheels accented with silver or gold. Z28 badges appeared on the right rear bumper and on the side valances. Engine choices in the pace cars were the same as the regular production Z28. The car that actually paced the event was equipped with a highly modified, all aluminum

7 L V8 that was not available on the replica cars. This engine was only available with a manual transmission in 1983. Due to its late introduction, 3,223 L69 V8s were sold for the 1983 model year. A BorgWarner 5 speed manual transmission replaced the previous 4 speed. A 4 speed automatic transmission with overdrive replaced the 3 speed automatic transmission in the Z28. In the Berlinetta, the standard instrument cluster was replaced by electronic readouts, including a bargraph tachometer and digital speedometer. The new dash came with an overhead console and pod mounted controls for turn signals, cruise control, HVAC, windshield wiper, and headlights. The radio was mounted inside a pod on the console that could swivel toward the driver or passenger. Please help improve this section by adding citations to reliable sources. Unsourced material may be challenged and removed. February 2014 Learn how and when to remove this template message A total of 2,497 L69 IROCZ models were made for 1985. The LB9 was available only on the Z28 and the IROCZ model with the TH700R4 automatic transmission. A total of 205 IROCZs equipped with the LB9 305 with the G92 Performance Axle Ratio option were made in 1985. The G92 option upgraded the rear axle gear ratio from 3.23 to 3.42. A total of 250 black and 250 red examples were produced. They were all equipped with the 5.0 TPI LB9 engine and TH700R4 automatic transmission. All came equipped with the IROCZ fog lights, wheels and ground effects, but with the base Camaros hood no louvers, rear decklid no spoiler, and no exterior decals. Please help improve this section by adding citations to reliable sources. Unsourced material may be challenged and removed. February 2014

Learn how and when to remove this template message This was the final year for the L69 5.0 305 HO 4bbl option, of which 63 were built for racing in Canadas Players series and 11 for public sale, making a total of 74. The 2.<http://atek-ent.com/upload/file/comdial-impact-8112s-gt-manual.xml>

8 L V6 was now the standard engine in the base model, replacing the 2.5 L I4 model. The 305 TPI LB9 horsepower rating dropped from 215 hp 160 kW to 190 hp 142 kW in the IROCZ models. All V8 engines received a new onepiece rear main seal. Please help improve this section by adding citations to reliable sources. Unsourced material may be challenged and removed. February 2014 Learn how and when to remove this template message The 305 TPI equipped with automatic transmission came with 190 hp, while the Manual 305 TPI got a 215 hp 160 kW rating. The 350 L98 gave a boost to 225 hp at 4,400 and 330ftlb at 2,800. Valve covers featured new sealing and center bolts in the valve covers. Heads featured new raised lip for improved valve cover sealing and the two center intake bolts were changed from 90degree orientation to 72 degrees. G92 and L98 cars got the BorgWarner HD 7.75inch 197 mm four pinion rear end, produced for GMs Holden of Australia Firebird WS6 cars went to this unit in 1986. These units can be identified by their 9 bolt rather than 10 differential cover that has a rubber drain plug. The BorgWarner logo is also cast into the bottom of the differential case. This rear axle came with tapered rather than straight roller bearings and a coneclutch rather than disclutch limited slip unit. These units came painted black from the factory while most others were bare metal. All 1987 350 TPI L98 IROCZs required 3.27 gears, J65 rear disc brakes, G80 limited slip differential, and KC4 engine oil cooler. Available on the Sport Coupe, LT and IROCZ, the conversion was performed on ttop equipped Camaros by American Sunroof Company ASC. A total 1,007 were produced in the first year of production. Some 1987 TTop models were made into convertibles by ASC after the customer took delivery. This is why there are some convertibles with the body VIN code of 2, meaning they were coupes, not convertibles which have a body VIN code of 3.

This was also the last year of production at GMs Norwood, Ohio, facility as sales continued to decline consolidating Camaro assembly to the Van Nuys factory located in Southern California. Please help improve this section by adding citations to reliable sources. Unsourced material may be challenged and removed. February 2014 Learn how and when to remove this template message The IROCZ package proved popular and the package became standard on Z28s. Also the old Z28s ground effects and spoilers were now standard issue on the base Camaro coupes. Base models received a new raised spoiler for the first half production year. G92 performance axle ratio available only on IROCZ with 5.0 TPI LB9. All 1987 350 TPI L98 IROCZs came standard with the 3.27 BW rear end and everything that was included with G92 but did not have the G92 RPO code because it was not mandatory; this changed in 1988 however when a 2.77 rear was standard and G92 had to be specified to get the 3.27 differential. The IROCZ was also treated to some small cosmetic changes. The large IROCZ callouts on the door moved from the front of the doors to the back, to put some space between the logos. The vin code 8 is the engine code for a real TPI 5.7L IROC. The Rally Sport was now the base model featuring body ground effects mimicking the IROC and the previous Z28 but with the 2.8 V6 fuelinjected motor as standard with the 305 as an option. The raised rear spoiler that became available in 1988 on the base coupes was shortlived and done away with for this year. The engine ratings carried over from 88 with the addition of IROCZ Coupes had a new dual catalytic converter exhaust option N10 that was standard with the G92 option only available on the 305 TPI motor with a manual transmission and the 350 TPI only available with the TH700R4 automatic. 1989 was also the last year any thirdgen with the B2L RPO 350 TPI L98 engine could be ordered in combination with the CC1 RPO removable TTop roof panels.

<http://www.drupalitalia.org/node/68673>

A total of 1,426 IROCZ coupes were equipped with the Performance Axle package in 1989. This included extra equipment intended to make the IROCZ more competitive in SCCA Showroom Stock

road racing events larger 11.65inch 296 mm rotors with 2piston aluminium calipers from PBR; an aluminum driveshaft; a special baffled fuel tank; specific shock absorbers; and stiffer suspension bushings. The fog lamps were also deleted. Big changes occurred, as all Camaros received a facelift in the form of a ground effects package for not only RS but also the Z28 models, while the IROCZ was no longer offered. The CHMSL was relocated from the spoiler to the top of the Hatch again like the 1986 models, except the housing was now on the inside rather than the outside of the hatch. The Convertible still retained the spoiler mounted 3rd brake light. The 1991 Z28 also received a new wheel design to accent the new body. The B4C amounted to little more than a Z28 powertrain and suspension in the RS. Car Craft Magazine refers to the B4C as a 1LE equipped with air conditioning; although this is slightly erroneous because in 1991, the large brakes with PBR calipers from the 1LE package were not included with B4C. Just under 600 B4C Camaros were sold for 1991. Different seam sealers, structural adhesives, and body assembly techniques were employed in key areas in an effort to reduce squeaks and rattles and improve the perception of quality. The 1992 version of the Camaro B4C Special Service Package got the addition of 1LE brakes. A total of 589 B4Cs were sold. The B4C option was also deemed popular enough to be carried on to the fourth generation model. They received the rough texture, cast aluminum style, intake runners from the TPI Corvette instead of the regular Camaro smooth tube ones. In some cases they were built with black painted valve covers instead of the normal silver valve covers. The change was purely cosmetic, performance remained identical to the previous year.

<http://fogerindo.com/images/canon-ma-200-manual.pdf>

As mentioned, the 1LE brakes were included with B4C in 1992, accounting for 589 of the 705 built. Since they were intended for racing, where extra weight is a disadvantage and interiors are often gutted after purchase, most were very lightly optioned. The majority of 1LE Camaros had the base interior, with no power options, cruise control, or even floor mats. Brussels, Belgium Uitgeverij AutoMagazine. 4 109 40. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Gexbert 1.0 out of 5 stars The book is so poorly printed that most of the images are hard if not impossible to use. Many of the sections are not specific enough to the car that he has to help shed light on the repair being performed. I haven't tried other manuals on this specific car, but I remember 20 years ago when I was a mechanic that Chilton's was THE manual to have. That's really changed. A few times I have pinpointed a problem with my Camaro, and according to the book, it's a walk in the park. Once you get down to it, reality sets in, and you realize the incompleteness of the info. I personally would prefer a lot more photos, and more realistic descriptions. This is a must have for any Third Gen Camaro Owner. Sorry, we failed to record your vote. Estes then announced a new car line, project designation XP836, with a name that Chevrolet chose in keeping with other car names beginning with the letter C such as the Corvair, Chevelle, Chevy II, and Corvette. In the book *The Complete Book of Camaro*, it states that Mr. Lund and Mr. Rollett found the word camaro in the French-English dictionary was slang, to mean friend, pal, or comrade. Therefore, the Camaro was touted as having the same conventional rear-drive, front-engine configuration as the Mustang and Chevy II Nova. In addition, the Camaro was designed to fit a variety of power plants in the engine bay. The first-generation Camaro lasted until the 1969 model year and eventually inspired the design of the new retro fifth-generation Camaro. Placed with the hideaway headlights, wing windows, and the more rounded out rear fender. Once they brought out the 1968 year they introduced the use of side marker lights. With the 1969 Camaro they did not have the wing windows as placed on the 1967 as well as having a more flat drawn out rear fender. The car was heavily restyled and became somewhat larger and wider with the new styling. Still based on the F-body platform, the new Camaro was similar to its predecessor, with a unibody structure, front subframe, an A-arm front suspension, and leaf springs to control the solid rear axle. RS shown to the right, SS package was dropped in 1972 and reintroduced in 1996. The cars were nearly 500 pounds (227 kg) lighter than the second generation model. National Highway Traffic Safety Administration (NHTSA) Regulations required a CHMSL (Center High Mounted Stop Lamp) starting with the 1986 model year.

www.rlktechnik.nl/wp-content/plugins/formcraft/file-upload/server/content/files/1626bec37d064b---canon-ixy-digital-600-manual.pdf

For 1986, the new brake light was located on the exterior of the upper center area of the back hatch glass. Additionally, the 2.5 L Iron Duke pushrod 4-cylinder engine was dropped, and all base models now came with the 2.8 L V6 OHV. For 1987 and later, the CHMSL was either mounted inside the upper hatch glass, or integrated into a rear spoiler if equipped. In 1987 the L98 350 cu in 5.7 L V8 engine became a regular option on the IROCZ, paired with an automatic transmission only. This created a Z28 in more subtle RS styling. The standard powerplant from 1993-1995 was a 3.4 L V6, then a 3.8 L V6 was introduced in 1995. A 350 MPFI LT1 Small Block V8 engine, which was introduced in the Corvette in 1992, was standard in the Z28. Optional equipment included all-speed traction control and a new six-speed T56 manual transmission; the 4L60E 4-speed automatic transmission was standard on the Z28, yet optional on the V6 models which came with a 5-speed manual as standard. Antilock brakes were standard equipment on all Camaros. A limited quantity of the SS version 1996-1997 came with the 330 HP LT4 small block engine from the Corvette, although most were equipped with the 275 hp LT1. The 1997 model year included a revised interior, and the

1998 models included exterior styling changes, and a switch to GM's aluminium block LS1 used in the Corvette C5. Chevrolet offered a 35th anniversary edition for the 2002 model year. Production of the FBody platform was discontinued due to slowing sales, a deteriorating market for sports coupes, and plant overcapacity, but an entirely new platform went on sale in 2009. The SS is powered by the 6.2 L 376 cu in LS3 V8 producing 426 hp 318 kW and is paired with a 6-speed manual. The automatic SS has the L99 V8 with 400 hp 300 kW. The RS appearance package is available on both the LT and SS and features 20-inch wheels with a darker gray tone, halo rings around xenon headlamps, a unique spoiler, and red RS or SS badges. Chevrolet has manufactured the ZLS model.

The 2012 model allows drivers to reach 7200 rpm which is higher than before for the V6; delivering an overall boost in the power and performance of the car. Almost all ZLS models have been released with various styles of a rear spoiler on the back as well. The first going to Rick Hendrick via Barrett-Jackson Car Auction. Convertibles had the same options as the coupe engines, RS, SS, etc.. The Camaro convertible added an aluminium brace over the engine assembly, and under the transmission. Due to the 2011 Fukushima earthquake, certain pigments were not available to make certain colors. The delay was due to the unexpected domestic demand. This edition Camaro also included a unique stripe package, red, white, and blue interior stitching and 45th edition exclusive 20-inch wheels. The SS model received an upgrade to the suspension system. All models received the RS spoiler and taillight details, steering wheel-mounted volume and radio controls, and Bluetooth connectivity controls as standard. The 2012 ZL1 Camaro included a 6.2 L LSA supercharged V8 producing 580 hp 430 kW. This engine was first used in the Cadillac CTSV for the 2009 model year. Other features included a 2-stage exhaust, the addition of suede seats, steering wheel, and shift knob, as well as ZL1-exclusive 20-inch aluminum wheels. In 2012, Chevrolet unveiled the production of the 2013 Camaro ZL1 Convertible. The RS appearance package incorporates LEDs into both the headlights and taillights. The 2016 Camaro weighs 200 lb 91 kg less than its predecessor. The package builds off the success of the previous generation 1LE, offering increased handling and track performance. The 2017 ZL1 edition is also one of the first cars with a 10-speed automatic transmission, making it the most unique one in its form. The new package tested to be three seconds faster around General Motors Milford Road Course than the next-fastest ZL1 Camaro.

The ZL1 1LE performance package introduces improved aerodynamics, a new racing-inspired adjustable suspension, and new lightweight forged aluminum wheels with Goodyear Eagle F1 Supercar 3R tires created especially for the ZL1 1LE. Overall the new performance package reduces the car's weight by 60 lb 27 kg over the ZL1. Chevrolet worked with Roger Penske to operate their unofficially factory-backed Trans Am team, winning the title in 1968 and 1969 with Mark Donohue. Jim Hall's Chaparral team replaced Penske for the 1970 season. This Camaro, number 13, had been built and driven by Henry "Smokey" Yunick. Smokey Yunick was a car builder who worked to reduce the weight of his cars by acid-dipping body parts and installing thinner safety glass. This Camaro had always kept its stock look and had a 302 engine that was able to produce 482 horsepower. One part that had come out of his testing was the Edelbrock Cross-Manifold. To this day the Smokey Yunick 1968 Camaro is owned by Vic Edelbrock Jr. It was the first American car of the series succeeding the Porsche Carrera RSR. Road racing Camaros can currently be found in the Sports Car Club of America's American Sedan series. They have also been the vehicle used in the Swedish Camaro Cup series since 1975. The Camaro also paced races at Daytona, Watkins Glen, Mosport in Canada, and Charlotte Motor Speedway. He also returns as a modified 2016 Camaro in *Transformers: The Last Knight*. The final moments of the 2018 reboot film *Bumblebee* reveal that the Camaro was his third-ever form that he took on upon arriving on Earth, after a Jeep and a Volkswagen Beetle. Retrieved April 5, 2016. Archived from the original on July 15, 2015. Retrieved April 5, 2016. Retrieved May 16, 2015. When asked, Chevrolet sales executives claimed a Camaro was a small, vicious animal that eats Mustangs. Motorbooks International. p. 4. ISBN 9780760318799. Publicly, GM blamed slow sales, a deteriorated sports coupe market, and plant overcapacity.
