There are lots of background beats to play with including basic 12 bar blues and you can just repeat a section of the beat to play along with a single beat. You can adjust the beat tempo faster or slower. I havent gotten into designing custom songs yet but it appears pretty straight forward if you read the directions. Your DR3 mates never make a mistake and dont argue with you either.<http://www.dean-cpa.com/files/adminpic/continental-freezer-manual.xml>

For learning to keep time it is invaluable and so much more fun than a Metronome.This is extremely difficult. Have never actually been able to use it.I picked up this Boss machine because my past experience with Boss products and those made by Boss parent company, Roland has been exceptional. This machine is more difficult to program than any other machine Ive used. The logic is much different than the others, and it seems that to perform basic or common functions like copying a preset pattern, you must go through an inordinately large number of steps. I give it 4 stars because of the good drum sounds and the number of functions it can perform, but Im being generous the presets are just about useless as they are too much overplaying, and the bass sound in all the presets is a corny synthesized slap bass sound think of the Seinfeld theme. If you really want to take the time to build some patterns, its a great machine. If youre looking just for something to jam along with, youd be better served with an Alesis SR16 or Zoom RT223; they have decent sounds and not such a a steep learning curve.Want to sell it It has just been sitting in one of my drawers. I want to sell it.I recently purchased the video manual for this have discovered it has more functions than I first thought. For example, not just a compressor and EQ, but a multiband compressor. This has led me to believe I should delve deeper and give it a chance to prove it self. I usually program and store my songs via midi bulk dump for solo performance, This machine does not provide for that but it can be a slave midi module for a seqencer. Also, I think it could be useful as a variation of style sound. It is voiced differently than my other units. Would I use it to replace the drummer in the band, not unless he didnt show up. As part of a solo act. Im working on the practicality of that right now. My Conclusions. This is a glorified Boss Dr5 rhythm composer. The patterns are located in

Styles.<http://enviomundial.com/userfiles/continental-freezer-2f-manual.xml>

When writing a pattern you decide where it will be used, Intro, fill, verse A, Fill B, etc. You can edit Drum kits, instruments within kits, type of Bass, Mute the instruments of choice, pan output, and a lot more, If you have the patience and time. Also how well thought out your goal, or arrangement of the song is. I have the Zoom RT223, and Boss DR5. The Zoom does have better sounds than the Boss DR5 but can not compete in certain areas. It is a matter of the ability to read, remember and execute what has been read in the manual. For some of us older people who haven't been able to keep up with the changing times it will be difficult at first to exit our comfort zones and endure until we overcome, but it not impossible to do. Good luck. I then imported various others from my arranger keyboards via Midi. Most did not transfer completely using all the drum sounds due to the different drum mapping of manufacturers, the missing sounds were then added in real and step time accordingly. I was pleased to find that there was 6 variations possible plus 3 fills, intro and ending, also each style can be allocated two different sounding drum kits. It does have a facility for a bass line to be added but as yet I have not found it of any benefit to me. The actual sound is quite impressive when played in a group format, the ability to run through the patterns via a footswitch is very useful. To sum up then, good sound and good value for money but I think the styles should include more genres for a wider appeal. Sorry, we failed to record your vote. I keep the settings permanently at Vintage Kit, Acoustic, Natural. There are many percussion embellishments, but I only ever use the tambourine. The snare has a crack, the kick drum a thump and the cymbals a crash easily resonant and authentic enough for my needs. I sometimes swap out the electric bass guitar for a fretless alternative, and my backing tracks for the early Presley classics Heartbreak Hotel and Baby, Lets Play House have to be heard to be believed fantastic. In terms of usability, there's a degree of trialanderror. Its advisable then to back up ones Songs by recording them onto a PC via the DR3s stereo phono sockets. There is a rotary volume control on the back that I max up when recording via a 25.00 Behringer UCA222 external soundcard the result is fabulous, noiseless WAV files that can be easily tidied up using audio editing software. Right it is very difficult to program. The manual is the same as the PDF manual no difference there. It is extremely complicated to understand you cannot do anything with the preset beats and as usual with machines like these there are only a few preset beats you can use.

<https://judo-allier.com/images/carpenter-manuals.pdf>

You can however wright your own beats and bass line but it is not simple and you will make lots of errors before you can get close to writing anything thats sounds remotely like a song. Contacting Boss was useless they never replied. There is a pretty good tutrorial on youtube by a guy named Frank. its fast but you can stop and start the video. Once you learn how to program it then it makes life a bit easier but in reality I wish I had bought a more simple drum machine like the Zoom one with a bass line. It works on battries and I use rechargeable ones and it works out fine. If your a guitarist you will need the footswitches. All in all it is a good sounding machine just very hard to program. hope this helps It produces good rhythm with a simple bass line. The built in presets are very good for jamming. I would recommend the addition of two foot pedals which give you the ability to start and stop the the DR3 and also move to the next pattern in the preset. If you are a guitar player the pedals are essential. You need to read the manual carefully to make your own patterns. It is not rocket science but needs to be read through carefully. If you have trouble programming the video, then stick to the preset patterns. The bass lines in the preset patterns are generally played in E, A or C, but can be changed to any other key. You can of course make up your own bass lines or drum rhythms using the key pads. The drum sounds are very realistic, particularly when played through an amplifier or through headphones. I would highly recommend this product. But playing on your own can get a little dreary. It not only has 99 prerecorded drum rhythms which can be speeded up or slowed down, but each is accompanied by a bass line which can be varied by key. It has the facility to record up to 99 complete song backings, derived either from the prerecorded rhythms or completely from scratch. I have to say that working out how to build your own recordings is not easy but then Im getting old!

<https://www.hotel-forsthaus.com/images/carotatore-manuale.pdf>

but even without this the opportunity to improvise around some of the many prerecorded tracks is fun enough in itself to make this a great purchase. Use it for my solo gigs. Manual is great.
